MobiNote DVX-POD

With its cool white styling and elegant interface, the 21-ounce DVX-POD could easily be mistaken for the iPod's much bigger brother. But size isn't the only thing that makes this gadget stand out. It's the first PMP to feature a 6.5-inch screen, complete with a 170-degree viewing angle and 720 x 480-pixel resolution, which means more than one person can enjoy the onscreen action at a time. The DVX-POD supports direct recording from TV, as well as DVD players. A one-click scroll wheel on the right side handles both navigation and volume control. The device has AV-out functionality and supports multiple video (MPEG-4, DivX, Microsoft WMV, Quicktime), audio (MP3, WMA), and picture (JPEG, BMP, GIF) formats.
